LEADERSHIP

Bimal Patel | President, Hartford Region

At Hartford Hospital and Hartford HealthCare our vision is our compass. It guides us as we work together to transform healthcare and provide coordinated care to our patients. Our promises to constantly improve and innovate are present in every community where we work to advance health and healing.

Our Eye Surgery Center in Newington is an excellent example of our vision. The Eye Surgery Center team delivers on that promise each day and brings our vision and values to life. For 20 years, our Center has been a leading destination for outstanding care, a place where patients from around the world have come to know and trust our doctors and staff for their skills and expertise.

Here, we aim to do more than simply describe our commitment to clinical excellence. Our vision demands that we be fully transparent and continually demonstrate our success to the people we serve. Fortunately, we are not alone in wanting to look closely at the impact of our work. We are grateful that physicians and patients alike frequently ask for quality data so they can better understand the outcomes of care delivery.

That’s why we are so proud to share our 2018 Eye Surgery Center Outcomes Report. We benchmark ourselves against the very best organizations in eye surgery, both nationally and internationally, to ensure we are meeting the highest standards. As a result, our patients can feel confident they are receiving world-class care when they choose our Eye Surgery Center.

This report highlights the superb work of our physician leaders, affiliated physicians, support staff and clinical partners. The entire team works tirelessly to surpass all expectations for care and satisfaction. Their results reflect our culture and bring our values of excellence and safety to life.

www.eyesurgerycenter.org
Diseases of the eye can be particularly devastating because they rob us of the rich world that most of us take for granted. Fortunately, many of these diseases can be reversed or greatly improved thanks to advances in surgery. As I’m sure you know, many forms of eye surgery are widely offered in a range of practice settings. Because vision is precious, it’s important for patients to weigh the performance of eye centers before choosing a doctor and a practice location for surgical treatment.

As the chief medical officer of Hartford HealthCare, I am immensely proud of the track record of the Hartford Hospital Eye Surgery Center, which I invite you to read about in this outcomes report. Here you will find data on high patient satisfaction, low surgical complications and superb surgical results that exceed international benchmarks.

Hartford HealthCare’s core values are integrity, excellence, compassion and safety. These values guide everything we do across our system, and they are on display every day at the Hartford Hospital Eye Surgery Center. Here you will find deeply experienced surgeons and staff members using the most advanced technology to help you safely make the most of your eyesight. We combine our exceptional surgical performance together with compassion, comfort and convenience.

Thank you for reviewing our outcomes in this report. We believe the numbers speak for themselves. Seeing is believing.
A destination for world-class eye surgery

We’re proud to have the best and brightest ophthalmologists affiliated with the Hartford Hospital Eye Surgery Center. Nearly 40 board-certified physicians, with more than 30 office locations across the state, have trusted our center for their patients’ care.

Serving the community

Hartford Hospital’s ophthalmologists have a long-standing commitment to community health. For decades, our doctors have donated their time and expertise to the Brownstone Ambulatory Care Clinic, which provides needed medical care to the underserved and uninsured in the local area. The clinic cares for upwards of 250 medical patients a day.

Eye care is one of the many specialties offered at the clinic. Since 2013, two ophthalmologists from the Hartford Eye Surgery Center have provided outpatient eye care.

They screen and follow patients with systemic eye disease and monitor patients on an ongoing basis for uncomplicated eye problems. They also triage and make referrals for specialized eye care for those patients that require more advanced and complex care.

Our ophthalmologists pride themselves in providing care to patients who would not otherwise receive it. In 2017, they saw 107 eye patients at the Brownstone Clinic, as well as provided charity care to over a thousand patients in their private offices. The Hartford Hospital Eye Surgery Center also provided $105,000 in charity care to over a thousand patients in need.

Additionally, they provide 24/7 emergency eye care coverage and consult services to the Hartford Hospital Emergency Department.
Hartford Hospital Eye Surgery Center
2018 Outcomes Report

STATISTICAL HIGHLIGHTS

Volume statistics

Founded in 1998, the Hartford Hospital Eye Surgery Center is a regional leader in surgical eye care, offering procedures to treat cataracts, glaucoma, corneal diseases, eyelid malfunctions and tumors, and select retinal diseases.

At the Eye Surgery Center, we perform more cataract and glaucoma procedures than anyone else in Connecticut. And we use the most advanced technologies available. We were the first eye surgery center in New England to offer Femtosecond-Laser Assisted Cataract Surgery – a minimally invasive, bladeless option that enhances precision during eye surgery.

We also offer the ORA/VerifEye and Verion systems, sophisticated technology that help our surgeons more accurately select and place lens implants during cataract surgery — allowing for improvement in customized vision correction for astigmatism at the same time. This tailored approach means patients have better visual outcomes immediately after surgery and for a lifetime.

The data in this report is based on an analysis of over 2,000 procedures performed at the Hartford Hospital Eye Surgery Center.

At the Eye Surgery Center, how patients feel is important to us. We are proud that 99.7 percent of our patients say they are satisfied with their surgical outcome.

Survey of Eye Surgery Center patients

- **Satisfaction with pain control**: 99.1%
- **Treated with courtesy and respect**: 99.9%
- **Satisfaction with surgical outcome**: 99.7%

* 2014-2016 data
** 2017 data
Cataracts are a clouding of the eye’s lens that results in decreased vision. They are fairly common, with most people developing them with age. We use traditional and laser-assisted techniques to perform cataract surgery with unprecedented precision — and without using a scalpel.

Our Eye Surgery Center has some of the lowest intraoperative complication rates when compared to international benchmarks. The most common complication is rupture of the capsular support structure. Of the 1,860 cataract surgeries analyzed in 2017, 0.5% experienced this intraoperative complication. International benchmarks are between 0.3 – 4.4%.

*According to data from Massachusetts Eye and Ear*
Achieving Target Refraction

Glass prescriptions are measured in units called diopters. A surgical result within 1 diopter is considered a good outcome. A surgical result within 0.5 diopters is considered an excellent outcome.

During the 2017 calendar year, 98.8 percent of 1,860 eyes studied achieved within one diopter of predicted refraction after cataract surgery. The international benchmark is between 71 percent and 94 percent. The Hartford Hospital Eye Surgery Center has met or exceeded these international benchmarks for successful cataract surgery.

Percentage of Patients within 1 Diopter of Target Refraction (higher is better)

- Eye Surgery Center: 98.8%
- *International Benchmark: 94%
- European Registry of Quality Outcomes: 95%

Percentage of Patients within 0.5 Diopters of Target Refraction (higher is better)

- Eye Surgery Center: 94.1%
- European Registry of Quality Outcomes: 72.7%

* According to data from Massachusetts Eye and Ear
Hartford Hospital’s Eye Surgery Center results compared very favorably to national benchmarks. 20/40 or better vision was achieved by 97.6 percent of Hartford Hospital Eye Surgery Center patients compared to 87.2 percent of patients in the national benchmark study.

* 20/40 or better visual acuity is required to drive in Connecticut
** American Academy of Ophthalmology, IRIS Registry (Intelligence Research In Sight)

* 20/40 or better visual acuity is required to drive without glasses in Connecticut

** No National Benchmark available
Eye Pressure Levels

Glaucoma is a disease of the eye in which high pressure damages the optic nerve. The optic nerve is responsible for transmitting images from the retina to the brain. Hartford Hospital Eye Surgery Center surgeons perform two types of surgery to treat glaucoma: minimally invasive glaucoma surgery (MIGS) and traditional glaucoma surgery.

Traditional glaucoma surgery includes filtering trabeculectomies and tubes which make small openings in the eye to allow for fluid to leave the eye. MIGS surgery involves the use of lasers to decrease the production of fluid and small filtering stents.

The goal of glaucoma surgery is to lower pressure over a three-month follow-up period. With MIGS surgery, the average pressure drop was 4.4 points. The more severe glaucoma patients requiring larger pressure decreases with traditional surgery had an average decrease in pressure of 14 points.
GLAUCOMA

Most glaucoma patients take eye drops to control their pressure. Our eye surgeons were able to significantly decrease the number of drops patients use after surgery.

### Number of Eye Drops Patients Use Before and After MIGS Glaucoma Surgery

</tbody>
</table>

(lower is better)
Hartford Hospital’s Eye Surgery Center complication rates with both MIGS and filter surgery are significantly lower than international benchmarks. The most common complication is transient hyphema (bleeding). Of the Hartford Hospital Eye Surgery Center’s MIGS operations, 1.5 percent had this complication and 0 percent of the filtering operations had this complication. International benchmarks for filtering operations are between 1-8 percent. There are currently no national or international benchmarks for MIGS.

Bradley Peters | A whole new world

Many years ago Glastonbury native Bradley Peters was diagnosed with rheumatoid arthritis, an autoimmune disease that causes severe joint pain. He began several rounds of steroid medication to manage his symptoms — treatment that ultimately helped his arthritis, but worsened the growth of his cataracts in the process.

At 57 years young, Peters said his eyesight deteriorated quickly, to the point where he had to limit his driving because he couldn’t drive safely at night. “One light would usually look like five to me,” he said.

A visit with his ophthalmologist revealed it was time to consider cataract surgery, something that scared him at the time. “As a patient, it was really unnerving for me. I had never been in an operating room before, and now I was going to have an operation on my eye ball,” he recalled. “But I trusted my doctor wholly, and I knew he knew what he was doing.”

His first procedure was performed on his left eye in February 2016.

Using sophisticated technology to take precise measurements, his doctor created a special lens made just for him. Peters had the option of choosing whether he would prefer to have near vision or far vision post-surgery, and Peters chose far.

Peters recalls no pain at all during the procedure. He added, “Those nurses are like angels to me. One of the nurses held my hand during the first part of my surgery. It made me feel comforted to know she cared that much — all the nurses were just exceptional.”

When he took his eye patch off the next morning, his result was what he described as crystal-clear vision — better than 20/20. “I haven’t seen like that since I was a little kid.”

He couldn’t wait to have his right eye done the next month, which went as smoothly as the first. “The same nurse held my hand again, and now my eyes both match. I couldn’t be more thrilled with the outcome. I see things more clearly now than I ever have before.”
Nearly a year ago 55-year-old Richard White says he felt like life was a blur — literally. White suffered from decreased vision due to a cataract in his left eye. A cataract is a clouding of the eye’s lens that typically affects people 55 and older.

After letting his cataract go for longer than he should have, he admits, he turned to a highly skilled ophthalmologist affiliated with Hartford Hospital’s Eye Surgery Center. At that point in his journey, he says everything he saw was a bit hazy.

White underwent successful cataract surgery in May 2018, and says his vision is now like night and day. “If you can imagine taking saran wrap off of your eye and being able to see — that’s how I would describe it,” he said. “My eyesight is so much better.”

In cataract surgery, doctors remove the lens inside the eye that is cloudy and replace it with an artificial lens (called an intraocular lens, or IOL) to restore clear vision. The procedure is performed on an outpatient basis.

White says both the procedure and recovery were easy. “This was the best experience I ever had with a medical procedure. I didn’t lose a day of work other than the day I was operated on. I was just a little sore the day after, but I put my drops in and followed the doctor’s orders to protect my eye. I was back to my activities almost immediately.”

The results are amazing. White, who works as a retail associate at a local store and spends a lot of time at the computer, says he no longer needs to use his magnifying glass to read.

He added that his vision is now 20/30, which permits him to drive legally in the state.

“My vision is so clear that the texture of the pavement jumps out at me,” he said.

What equally impressed White was the care he received from his physician and the entire staff at the Hartford Hospital Eye Surgery Center. “I couldn’t ask a question that hadn’t already been answered. It was a nerve-wracking procedure, but they made me feel comfortable from start to finish,” he said.

White will have the cataract removed from his right eye next.

“A cataract takes over slowly until you can’t tolerate it anymore. It’s amazing to be able to see again. I wish I did it sooner,” he shared.
When you help conservators restore artwork for a living, your eyes are valuable tools of the trade. But for someone with cataracts, dimming eyesight can prevent you from doing your job by dampening colors and blurring your vision.

Henry DePhillips learned this firsthand. As a chemist, he brought his insight to the art world by helping repair and refurbish priceless paintings. But it was his eyesight that brought this work to a halt — keeping him from doing what he loved and keeping his expertise from important restoration projects.

Henry's cataracts made the lenses of his eyes progressively opaque, resulting in hazy vision and muted colors. He knew he needed help and started to learn about laser-assisted cataract surgery, a safe and common procedure often used by older adults whose vision problems are interfering with everyday life.

Henry was interested in the procedure because he was a longtime professor of chemistry at Trinity College in Hartford. Through his teaching and work as a scientist, he had worked with lasers for more than two decades and knew what they could do.

The procedure is painless and usually takes about a half hour to perform.

Henry was amazed with the results. Colors that used to blur together were now bright and clear; vivid shades of red, yellow and blue replaced the dull greys he had become accustomed to. He was able to see greater distance, allowing him to play tennis without glasses and see the ball better.

His experience at the Eye Surgery Center was so good that his wife, Shirley DePhillips, decided to plan the same procedure to address her own cataracts.

Shirley is an actor who performs in regional theater. While Henry experienced blurred vision and muted colors, Shirley's cataracts prevented her from seeing detail—especially on stage.

After a successful procedure, Shirley performs for local audiences without glasses, allowing her to get into character for any role. She notices the improved details everywhere she goes: from seeing the individual leaves on trees to seeing architectural details when she travels to Italy each year with Henry.

Henry and Shirley are grateful each day for their improved vision, saying their only regret is that they waited so long to do it.
What our patients say about us

“Your services were excellent.”

“Everyone and everything was excellent. All the staff was friendly and concerned. Thank you Hartford Hospital Eye Surgery Center. You all did a great job!”

“I received cataract surgery over the past two weeks. I was extremely pleased with every aspect of the process – from the check-in staff to the moment I walked out after surgery. Every single phase and every staff member was pleasant, caring, friendly and professional.”

“Just keep up the great work! I had a very positive experience.”

“All the staff were very pleasant and upbeat, making this a great experience. I will highly rate this facility to anyone – just enjoy the comforting treatment given.”

“Thank you to all of the staff for my excellent care.”

“I’m very happy with the treatment I got from the staff and my doctor.”

“The staff was great and courteous. They made me feel very comfortable.”

“Everybody was friendly yet professional. They each explained what was going on.”

“All the staff were very professional and concerned about my comfort.”

“My experience was wonderful. The staff was kind, courteous and very professional. 5 stars!”
Hartford Hospital is an 867-bed, not-for-profit hospital located in the heart of Connecticut’s capital city. It has 7,000 employees and an active medical staff that includes more than 1,000 physicians and dentists in 18 departments. The hospital is one of New England’s largest tertiary care centers and has one of the region’s busiest surgery practices. It is the region’s only Level I Trauma Center, as well as a major referral center.

The hospital is a respected academic medical center. It trains physicians in collaboration with the University of Connecticut School of Medicine and is a major teaching site for nurses and allied health professionals. Our Center for Education, Simulation and Innovation is a unique, high-technology medical education center that attracts learners from around the world. U.S. News & World Report annually ranks Hartford Hospital among America’s Best Hospitals. The hospital was ranked No. 1 in U.S. News & World Report’s latest Regional Ranking. Many of the hospital’s clinical programs have received national recognition for quality.

Major centers of clinical excellence include cardiology, oncology, emergency services and trauma, mental health, women’s health, orthopedics, bloodless surgery and advanced organ transplantation. The Hartford HealthCare Bone & Joint Institute, which opened in January 2017 adjacent to Hartford Hospital, is Connecticut’s first and only orthopedic hospital. Among Hartford Hospital’s divisions are the Institute of Living, a 114-bed mental health facility with a national and international reputation for excellence; and Jefferson House, a 104-bed long-term-care facility.

In addition to its 65-acre campus in downtown Hartford, the hospital operates satellite facilities in numerous suburban locations. It owns and operates LIFE STAR — an air ambulance service with bases in Connecticut and Massachusetts. Hartford Hospital was founded in 1854 in response to a community need identified when an industrial explosion resulted in mass casualties and no facility existed to treat the injured. Service to the community remains a Hartford Hospital priority more than 160 years later.
About Hartford HealthCare

Our vision
To be nationally respected for excellence in patient care and most trusted for personalized coordinated care.

Our mission
To improve the health and healing of the people and communities we serve.

Our values

Caring: We do the kind thing.
Every Hartford HealthCare staff member touches the lives of the patients and families in our care. We treat those we serve and each other with kindness and compassion and strive to better understand and respond to the needs of a diverse community.

Safety: We do the safe thing.
Patients and families have placed their lives and health in our hands. At Hartford HealthCare, our first priority — and the rule of medicine — is to protect them from harm. We believe that maintaining the highest safety standards is critical to delivering high-quality care and that a safe workplace protects us all.

Excellence: We do the best thing.
In Hartford HealthCare, only the best will do. We work as a team to bring excellence, advanced technology and best practices to bear in providing the highest-quality care for our patients and families. We devote ourselves to continuous improvement, excellence, professionalism and innovation in our work.

Integrity: We do the right thing.
Our actions tell the world what Hartford HealthCare is and what we stand for. We act ethically and responsibly in everything we do and hold ourselves accountable for our behavior. We bring respect, openness and honesty to our encounters with patients, families and coworkers and support the well-being of the communities we serve.
