Pulmonary Laboratory
The Pulmonary Laboratory at Hartford Hospital features advanced diagnostic services needed to accurately assess and treat lung conditions. The Pulmonary Laboratory includes two pulmonary function testing rooms with state of the art equipment. Our medical director is board-certified in pulmonary and critical care medicine. The technicians are registered respiratory therapists who are certified in pulmonary function testing. The laboratory is available for inpatient and outpatient examinations.

Services are used in part for the following:
- COPD
- Asthma
- Chronic Cough
- Dyspnea
- Cystic Fibrosis
- Pulmonary Fibrosis
- Pre-op Testing
- Pulmonary Hypertension
- Vocal Cord Dysfunction

Services
- Spirometry with or without bronchodilator
- 6 minute walk test
- Lung volumes measured by body plethysmography, nitrogen washout or helium dilution
- Diffusion capacity
- Arterial blood gases
- Oximetry
- Maximum inspiratory and expiratory pressures
- Maximum ventilatory ventilation

Additional specialized testing
- Provocation/Methacholine studies
- Exercise induced asthma study
- Modified shunt study
- Direct laryngoscopy with exercise for vocal cord dysfunction
