

THINKING SMALL

MINIMALLY INVASIVE PROCEDURES ARE
REVOLUTIONIZING PATIENT CARE.

PHYSICIANS HAVE USED SURGERY FOR CENTURIES TO TREAT DISEASE AND SAVE LIVES. BUT TODAY NEW TECHNOLOGIES, EXPANDED KNOWLEDGE AND INNOVATIVE PROCEDURES ARE REVOLUTIONIZING SURGICAL CARE. MANY PROCEDURES THAT USED TO REQUIRE SIZABLE, OPEN INCISIONS CAN NOW BE DONE LAPAROSCOPICALLY, USING SMALL INCISIONS FOR TINY CAMERAS AND INSTRUMENTS.

Many conditions, such as stroke, for which there was once no treatment, can now be resolved using minimally invasive, image-guided procedures. For patients this “thinking small” means less trauma, reduced risk and shorter, easier recovery. ¶ “Hartford Hospital performs more minimally invasive surgery than any hospital in the region,” says Orlando Kirton, MD, Director of the Department of Surgery. “Innovation is part of our culture. We attract surgeons committed to staying at the leading edge, and the hospital supports this with technology and more.” ¶ “Our field is extremely innovative,” says Domenic Zambuto, MD, Director of Interventional Radiology and a member of Jefferson Radiology.

“The minimally invasive, catheter-based techniques we have developed have been proven effective and embraced by other fields. And every year, there’s something new.” ¶ Francis Kiernan, MD, Director of the hospital’s Cardiac Catheterization Laboratory, expects minimally invasive procedures to play an increasingly important role in his field. ¶ “Technology now in development may one day make it possible for us even to replace heart valves using catheter-based techniques,” Dr. Kiernan says. ¶ This much is certain: The best surgical and interventional minimally invasive techniques will always be available to patients at Hartford Hospital.

PEOPLE WHO ARE EXTREMELY OVERWEIGHT FACE A HOST OF PROBLEMS. MEDICAL ISSUES—INCLUDING DIABETES, HIGH BLOOD PRESSURE, HIGH CHOLESTEROL AND OTHERS—CAN THREATEN THEIR LIVES. SOCIAL, PROFESSIONAL AND PRACTICAL ISSUES CAN DETRACT FROM THEIR QUALITY OF LIFE. FOR MANY OF THESE PEOPLE, SURGICAL WEIGHT LOSS PROCEDURES—BARIATRIC SURGERY—CAN RESULT IN DRAMATIC IMPROVEMENTS IN HEALTH AND WELL-BEING. AND TODAY, THOSE PROCEDURES CAN BE DONE EVEN MORE SAFELY USING A MINIMALLY INVASIVE APPROACH.

Surgical weight loss procedures include the Roux-en-y gastric bypass procedure, which prevents food from entering a portion of the stomach, and the newer LAP-BAND® procedure, which reduces the functional size of the stomach by placing a band around its upper portion. Darren Tishler, MD, who heads the Surgical Weight Loss Program at Hartford Hospital, performs both procedures laparoscopically. ¶ “Advanced minimally invasive procedures are the perfect choice for bariatric surgery,” says Dr. Tishler. “People with obesity have a higher risk of complications from open surgery, such as infections or hernias. These problems are minimized with laparoscopic techniques.” ¶ Each procedure is done under general anesthesia, using only five small incisions. Patients spend only one or two days in the hospital. ¶ Dr. Tishler and his colleague Pavlos Papasavas, MD,

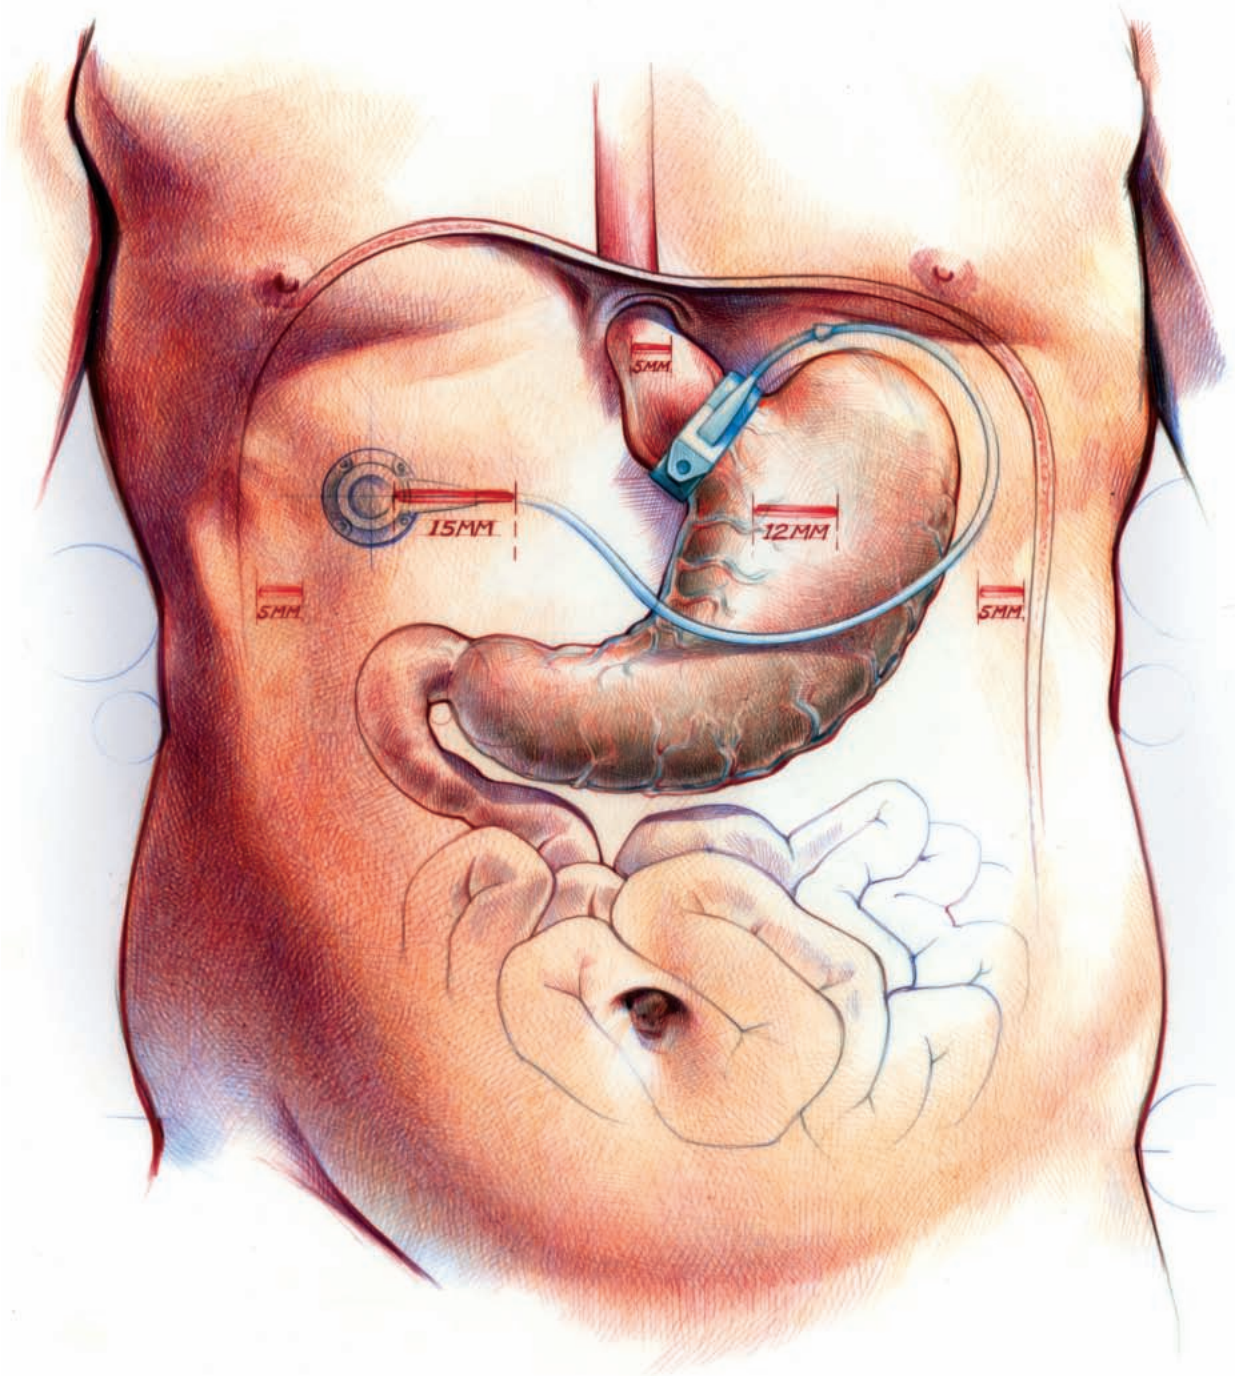

both members of Connecticut Surgical Group, are board-certified general surgeons who are fellowship-trained in minimally invasive and bariatric surgery. From 2004 through 2007 alone, Dr. Tishler evaluated more than 750 patients and performed more than 500 minimally invasive bariatric procedures. The majority of patients who have these procedures lose weight, but more importantly, they’re typically cured of the associated medical problems that had plagued them. ¶ “The key to the success of our patients is our multidisciplinary program,” Dr. Tishler says. “We have a team of professionals—nurses, psychologists, nutritionists and other specialists—who work with our patients. It’s only because of this comprehensive program that we are able to give patients the results they want and ensure the safety they deserve.”

Pavlos Papasavas, MD
Bariatric Surgery

Darren Tishler, MD
Bariatric Surgery

THE TECHNIQUE: The minimally invasive LAP-BAND® procedure helps people lose weight by reducing the functional size of the stomach. The operation requires just five small incisions and only a day or two in the hospital. The procedure is completely reversible.

HAVING THIS SURGERY WAS
THE BEST LIFE CHANGE I'VE
MADE. I'M HEALTHY. I FEEL
GOOD ABOUT MYSELF.

Stacie Lepore
Glastonbury, CT

Over 10 years Stacie Lepore saw her weight spiral from 110 to 240 pounds. The 5-foot-2-inch young woman struggled to lose weight, but nothing worked. She had chronic migraines, hyperthyroidism, high cholesterol, respiratory problems and borderline diabetes. In 2005, she began researching bariatric surgery. Concerned about complications reported at other programs, she turned to Hartford Hospital and Darren Tishler, MD. "He stressed that surgery was 'a tool, not a fix,'" Mrs. Lepore says. After a rigorous six-month evaluation, she had a LAP-BAND® procedure in August 2006. It involved five tiny incisions, a one-night hospital stay and minimal pain. A year later, Mrs. Lepore, who rises at 4:30 a.m. to go to the gym, was down to 149 pounds, and all of her other illnesses were gone.

"Having this surgery was the best life change I've made. I'm healthy. I have confidence. I feel good about myself. And Dr. Tishler and the staff are incredible."

SURGICAL REMOVAL OF THE KIDNEY, OR NEPHRECTOMY, IS TYPICALLY PERFORMED WHEN A PATIENT HAS A CANCEROUS KIDNEY TUMOR OR WHEN AN INDIVIDUAL DECIDES TO DONATE A KIDNEY FOR TRANSPLANTATION. NOT LONG AGO, THE “OPEN” SURGICAL PROCEDURE INVOLVED A NEARLY FOOT-LONG INCISION, CONSIDERABLE PAIN AND WEEKS OF RECOVERY. TODAY, HARTFORD HOSPITAL SURGEONS ARE NATIONAL LEADERS IN MINIMALLY INVASIVE TECHNIQUES THAT REQUIRE JUST A FEW TINY INCISIONS TO REMOVE THE KIDNEY OR—IN AN EVEN MORE RECENT ADVANCE—ONLY A PORTION OF IT.

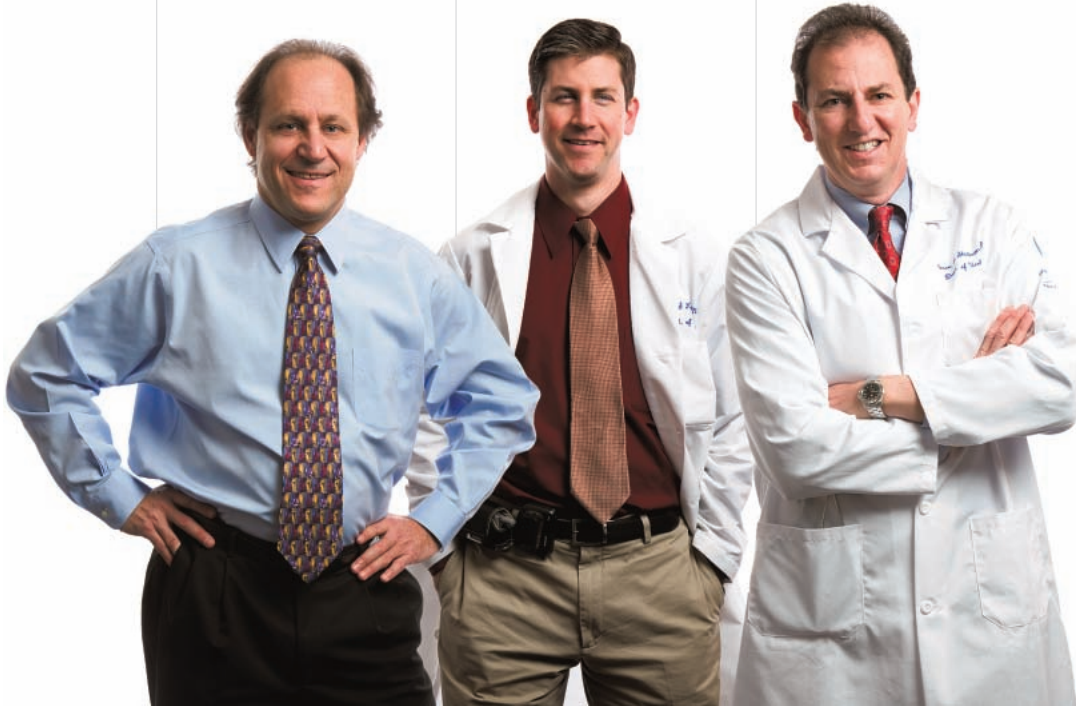

Surgeons at Hartford Hospital were instrumental in developing many of the minimally invasive techniques now in use for kidney surgery. Steven Shichman, MD, a member of the Urology Division of Connecticut Surgical Group, was among the first in the country to perform laparoscopic nephrectomies in patients with kidney cancer. David Hull, MD, Director of the hospital’s Transplant Program, led the region in laparoscopic removal of a donor kidney. In 1998, Dr. Shichman pioneered the hand-assisted laparoscopic nephrectomy (HALN), today one of the gold standards in minimally invasive nephrectomy. He has taught the technique to well over 1,000 surgeons from the U.S. and overseas. ¶ Surgery is the only way to cure kidney cancer. The number of nephrectomies is on the rise because improved imaging technologies allow earlier detection. The percentage of nephrectomies being performed laparoscopically,

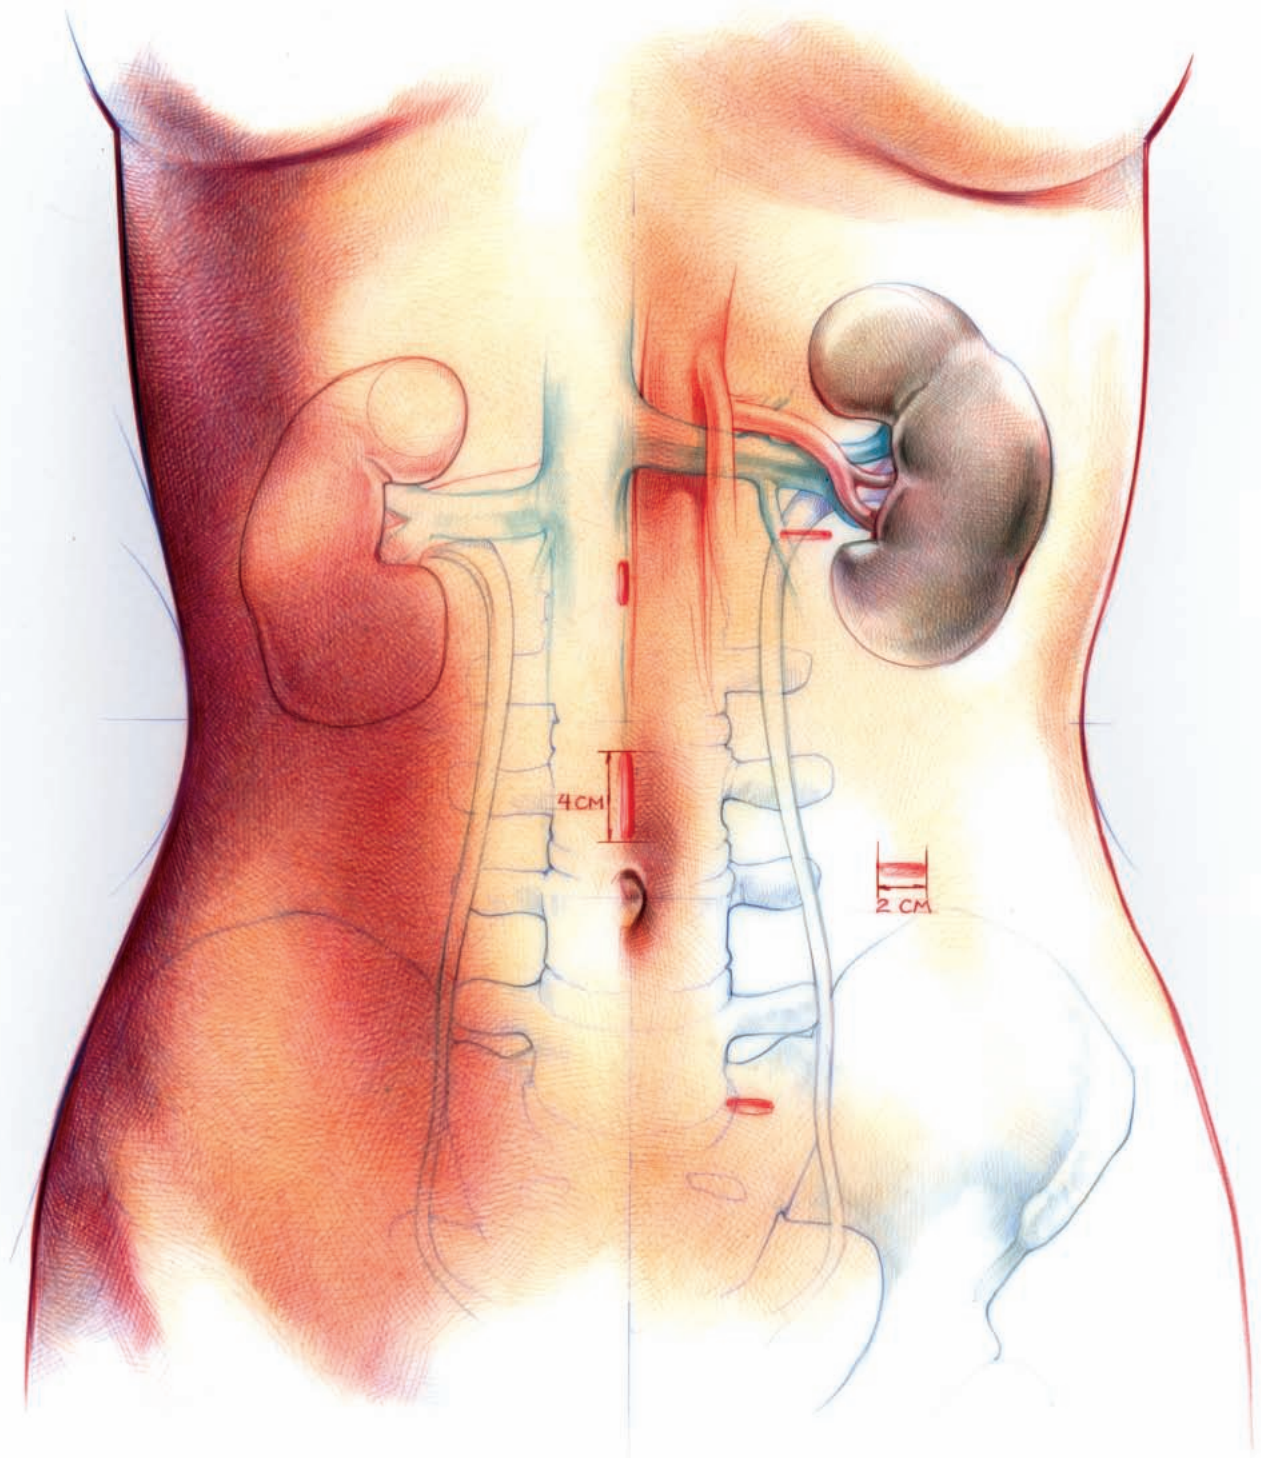

rather than open, has grown dramatically since Dr. Shichman introduced the HALN technique. Last year, Dr. Shichman performed 120 nephrectomies—more than any other surgeon in the region—and more than 80 percent of them were done minimally invasively. Patients go home two or three days after surgery, instead of five or six, and experience less pain. They typically return to baseline activity in two weeks, rather than the six to eight weeks associated with open surgery. ¶ Hartford Hospital is a recognized center of excellence in kidney transplantation. Half of all kidneys donated in the U.S. are from live volunteer donors. Removing the organ intact and able to be implanted is extremely exacting. With open surgery, the recovery period for donors used to be long and difficult—much worse than that of the recipient. But with Dr. Hull’s use of the hand-assisted laparoscopic approach, donors are in the >

THE TECHNIQUE: Laparoscopic surgical removal of a kidney involves only two small incisions and three punctures, rather than the nearly foot-long incision of the past. Patients go home more quickly, have less pain and resume normal activities in two weeks rather than eight.

hospital for only three and a half days, on average, rather than two weeks, and are able to return to normal activities sooner. Dr. Hull has extensive experience in this specialized surgery, having performed well over 200 cases. ¶ For patients with kidney cancer, Dr. Shichman is now able to offer a laparoscopic partial nephrectomy, a procedure available at only a few hospitals in New England. ¶ “For approximately half of our patients, we can remove only the diseased portion of the kidney,” Dr. Shichman says. “This minimizes the patient’s loss of kidney function. The more kidney function is preserved, the better the patient’s quality of life and prospects for longevity.” ¶ In another advance, Dr. Shichman and a Connecticut Surgical

Group colleague, Stuart Kesler, MD, are developing a robotic approach for partial nephrectomies. This innovation would enable even patients with complex cases to be candidates for laparoscopic, rather than open, surgery. ¶ Dr. Shichman says that few hospitals in the country are as innovative as Hartford Hospital in developing improved surgical procedures, and he attributes it to the quality of surgeons on staff, the sharing of knowledge across various surgical disciplines and the support of hospital administration. ¶ “We’re pushing the envelope, but in a safe, patient-oriented fashion,” notes Dr. Shichman. “While we are exceptionally progressive, we are also absolutely committed to doing what is best for each patient.”

I CHOSE HARTFORD HOSPITAL
BECAUSE OF THE WARM, CARING
DOCTOR AND THE SUPERIOR
PROCEDURE.

Barbara Smith, RN
Millbrook, NY

When Barbara Smith, a registered nurse, was told her cancerous kidney had to be removed, she and her daughter, Leslye, were determined to obtain the finest treatment possible. They met with a surgeon at a major medical center in New York City, then traveled to Hartford Hospital, where they consulted with Dr. Steven Shichman. The difference was striking. Dr. Shichman took the time to explain the surgical procedure carefully and answer all their questions. And his more advanced, minimally invasive technique would clearly involve less trauma and faster recovery. When the day came, Mrs. Smith’s operation went exactly as planned, entailing only a small incision and two tiny punctures. Five days after surgery, she was recovering comfortably at home.

“Even though Hartford Hospital is hours from where I live, I chose it because of the warm, caring doctor and the superior procedure. Plus, I can’t say enough about the staff’s good care of me after surgery. I know I made the right choice.”

A MAJOR INNOVATION IN LAPAROSCOPIC SURGERY IS THE DA VINCI® SURGICAL SYSTEM. THIS ROBOTIC DEVICE GIVES SURGEONS GREATER FLEXIBILITY AND PRECISION AND MAKES MINIMALLY INVASIVE SURGERY POSSIBLE FOR MORE PATIENTS. IN 2003, HARTFORD HOSPITAL BECAME THE FIRST HOSPITAL IN CONNECTICUT AND ONE OF THE FIRST IN NEW ENGLAND TO ACQUIRE THE SYSTEM. TODAY, HARTFORD HOSPITAL IS ONE OF ONLY EIGHT IN THE COUNTRY TO HAVE THREE ROBOTS AND IS IN THE TOP 10 IN VOLUME OF CASES. HARTFORD HOSPITAL SURGEONS IN A VARIETY OF DISCIPLINES ARE GLOBAL LEADERS IN USING ROBOTICS TO PROVIDE THE VERY FINEST SURGICAL CARE.

Joseph “Peppie” Wagner, MD, recognized early on the vast potential of robotic surgery. In 2001, the urologic oncology specialist was the second surgeon in the country to perform a robotic radical prostatectomy, or surgical removal of the prostate. Since then, he has performed nearly 1,000 such procedures. Today he directs Hartford Hospital’s Robotic Surgery Program, which has grown exponentially since he came to Hartford in late 2003. ¶ Often referred to as a “robot,” the da Vinci® device is actually a sophisticated surgical tool. The robotic instruments and camera are inserted in the patient through tiny puncture holes. The surgeon operates the device from a console while viewing a magnified, three-dimensional image of the surgical field on a high-definition screen. As the

surgeon manipulates the master controls at the console, the small, flexible robotic “hands” at the surgical site replicate his or her movements, performing surgical motions with unparalleled precision. ¶ “The robotic system takes laparoscopic surgery to a new level,” says Dr. Wagner, who is a member of Connecticut Surgical Group. “The robot’s camera gives you a three-D image with depth perception you don’t get in standard laparoscopy. And because the instruments have wrists, they can do all the rotations and maneuvers your hand can do, but in a smaller space.” ¶ The robot offers even greater precision than the human hand, says Vincent Laudone, MD, who also regularly uses the robot for prostatectomies. ¶ “As fine a movement as the surgeon can make, the robot will make one >

Stuart Kesler, MD
Robotic Prostatectomy/Urologic Surgery

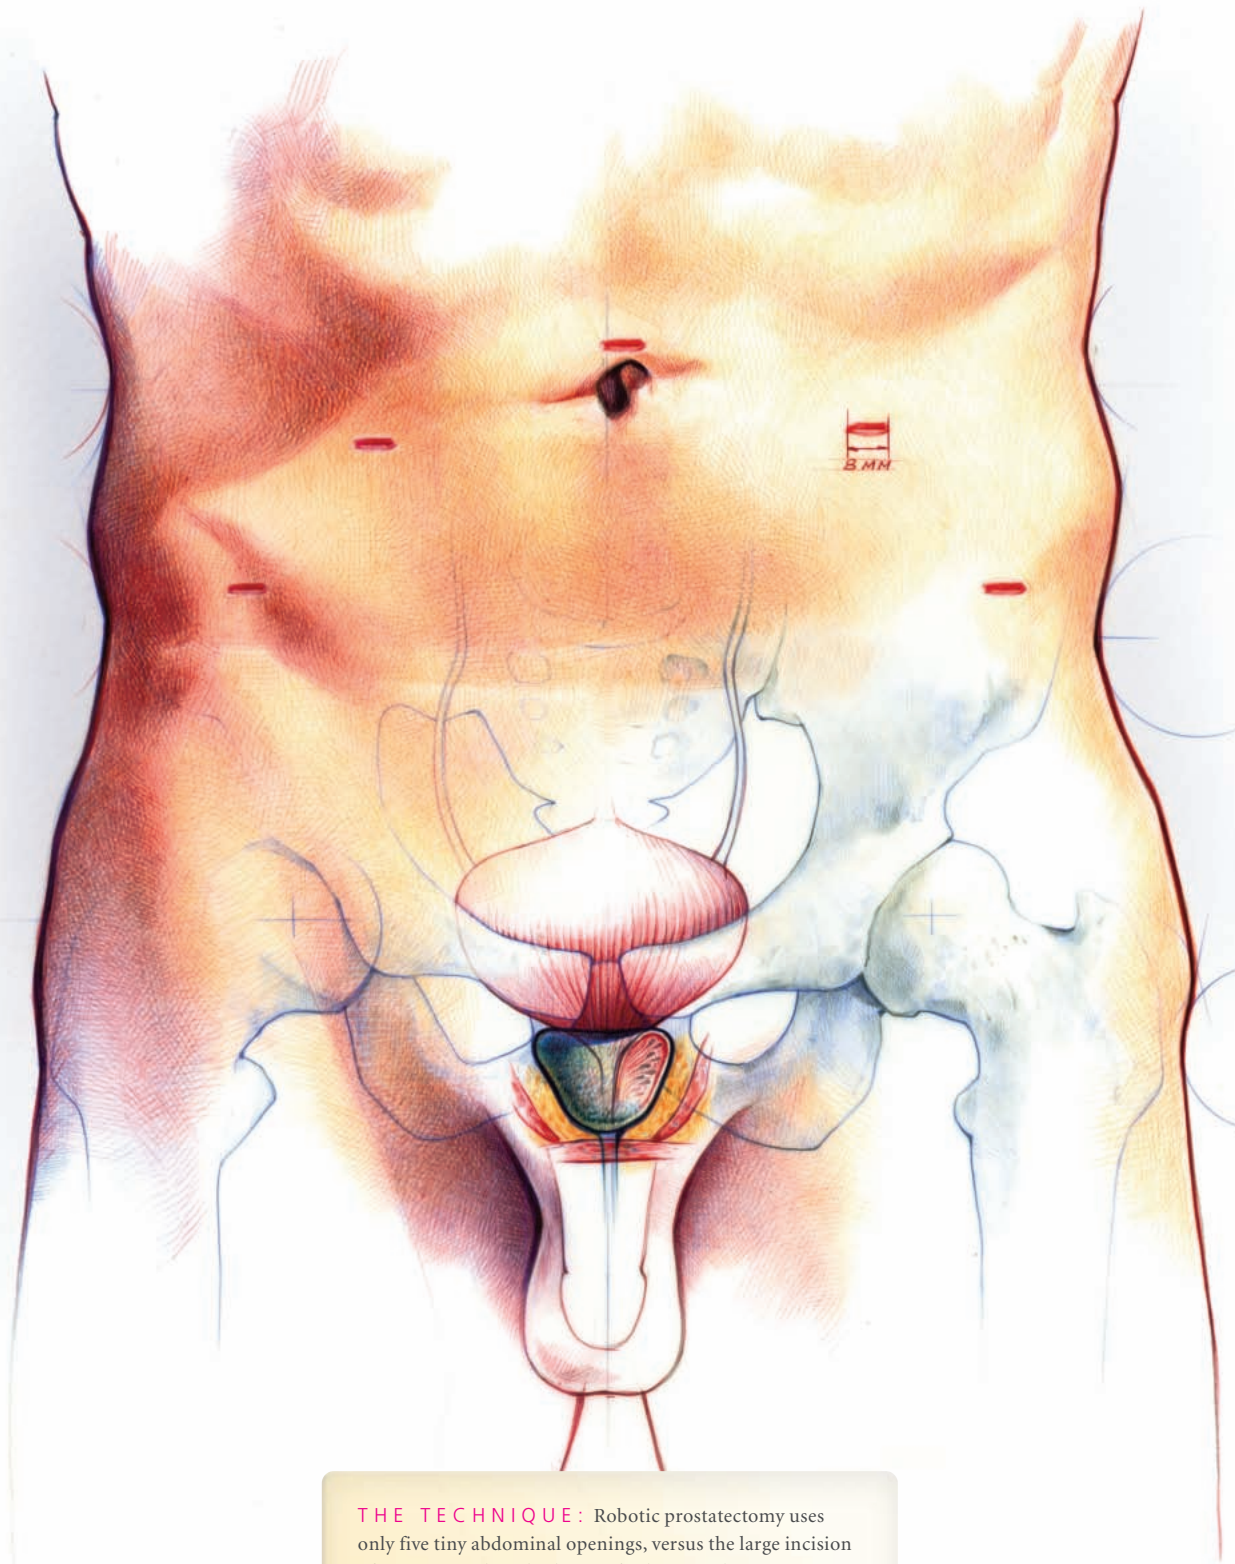

Joseph Wagner, MD

Robotic Prostatectomy/Urologic Surgery

THE TECHNIQUE: Robotic prostatectomy uses only five tiny abdominal openings, versus the large incision of conventional methods. Hartford Hospital surgeons using robotic techniques achieve superior results in terms of potency, continence and complete removal of cancer.

that's twice as fine," Dr. Laudone notes. "The robot scales down the motion and doubles the precision." ¶ Because the surgeon can see better and operate more precisely, and because the flexible robotic "hands" can bend around internal structures straight laparoscopic instruments can't, robotics is allowing more and more procedures to be done minimally invasively, and with excellent results. ¶ Prostatectomy is one of the procedures for which the robot is used most frequently. The operation requires just five tiny abdominal openings, rather than the large incision of just a few years ago. In the hands of these Hartford Hospital physicians, the results in terms of potency, continence and complete removal of cancer are superior to open surgery. Hartford Hospital urologists are recognized leaders in this field, and have a level of experience few can match. Together, Drs. Wagner and Laudone performed nearly 400 cases this year alone. The numbers are only increasing as Stuart Kesler, MD, a robotic-trained surgeon

from Robert Wood Johnson University Hospital, has joined the team. All are members of Connecticut Surgical Group. ¶ Dr. Kesler and Dr. Steven Shichman are developing a robotic approach for partial kidney removal, and the device is already in use for a wide range of other urologic procedures such as cystectomy (bladder removal). Hartford Hospital's urologic robotic surgeons will teach a course on robotic surgery next spring at the national meeting of the American Urologic Association. ¶ "There is no urologic procedure we're not capable of doing in a minimally invasive fashion," notes Dr. Wagner. "Very few places in the country can say that." ¶ Hartford Hospital is the largest center in New England for robotic cardiothoracic surgery. Robert Gallagher, MD, a member of Cardiothoracic and Vascular Surgeons, PC, uses the robot for several procedures. One is to use the mammary artery inside the chest wall to perform heart bypass surgery without having to cut through the patient's sternum. This

reduces postoperative pain and risk of bone infection. Plus, patients return to normal activity in half the time. He also uses it for mitral valve repair and closure of atrial septal defects. Dr. Gallagher and his colleague, David Underhill, MD, with CT Cardiothoracic Surgical Associates, often make presentations on robotic cardiothoracic surgery to surgeons at other hospitals. ¶ Gynecologic oncologist Amy Brown, MD, MPH, of Hartford Hospital's Women's Health Services, is one of very few physicians in the country with extensive experience in using robotics to perform hysterectomies, with and without surgical removal of lymph nodes, for patients with gynecologic cancer and certain benign conditions. She recently did a live webcast of the procedure to educate prospective patients and physicians. ¶ "The benefit to the patient is recovery time," Dr. Brown says. "Patients need only two to four weeks of recovery at home, instead of six to eight." ¶ In Hartford Hospital's Division of Urogynecology, Drs. Christine LaSala, Paul Tulikangas and

Adam Steinberg, all members of Urogynecology Associates, use robotics routinely to treat uterine or bladder prolapse with a procedure called abdominal sacral colpopexy. This is a very effective procedure, and for the last five years, they've done it laparoscopically. They adopted a robotic approach in early 2006 so they could provide the benefits of minimally invasive surgery to a greater number of patients. ¶ "We are the only group in Connecticut that has experience in this approach and can offer it to the majority of women with prolapse," says Dr. Tulikangas. ¶ Dr. Tulikangas also points out that Hartford Hospital has taken a very deliberate and measured approach to robotic surgery. ¶ "This is great technology, and we want to make it available to patients, but safety is our first priority," Dr. Tulikangas says. "Physicians wishing to use it must do extensive coursework, be proctored and go through an exacting credentialing process. Hospital leadership wanted to be sure to put safety first, and I respect them for that."

THE ROBOT WILL MAKE ONE THAT'S TWICE AS FINE.

“PHYSICIANS AND FORMER PATIENTS SPOKE HIGHLY OF THE ROBOTIC PROSTATECTOMIES BEING PERFORMED AT HARTFORD HOSPITAL.”

Bill Kenney
Essex, CT

Bill Kenney was exceptionally physically fit and only 44 years old when he was diagnosed with prostate cancer in January 2007. Bill and his wife, Kelly, immediately began aggressively researching treatment options, talking to others who'd had prostate cancer and consulting with specialists at major medical centers throughout the Northeast. "We wanted to be as expert as we could be before making a decision," Mr. Kenney says, "and we wanted a surgeon who had performed at least 200 procedures." Everywhere they went, physicians and former patients spoke highly of the robotic prostatectomies being performed at Hartford Hospital by Vincent Laudone, MD, and his colleagues. After meeting with Dr. Laudone, the Kenneys were so impressed that, Mr. Kenney says, "It became a very easy decision to select him and Hartford Hospital."

"I was off of pain medications in 24 hours and back to work in 10 days, with complete urinary continence. Dr. Laudone is a true professional. It couldn't have been a better experience."

COLORECTAL SURGERY

THE PAST 15 YEARS HAVE WITNESSED A REVOLUTION IN SURGICAL PROCEDURES FOR TREATMENT OF CONDITIONS SUCH AS COLON CANCER, ULCERATIVE COLITIS AND DIVERTICULITIS. OPERATIONS SUCH AS COLECTOMY—COMPLETE OR PARTIAL REMOVAL OF THE COLON—THAT USED TO REQUIRE LENGTHY, OPEN INCISIONS CAN NOW BE PERFORMED USING JUST A 3-INCH INCISION, PLUS TINY OPENINGS FOR A CAMERA AND INSTRUMENTS.

HARTFORD HOSPITAL SURGEONS HAVE LED THIS TRANSFORMATION. IN ADDITION TO DEVELOPING AND PERFECTING TECHNIQUES NOW USED AROUND THE WORLD, HARTFORD HOSPITAL SURGEONS HAVE GAINED AN EXTRAORDINARY LEVEL OF EXPERIENCE IN PERFORMING EVEN RARE, COMPLEX PROCEDURES SAFELY AND EFFECTIVELY.

In the late 1990s, Hartford Hospital surgeons—all members of the Colorectal Division of Connecticut Surgical Group—pioneered the hand-assisted laparoscopic colectomy now used by physicians around the world. Now they teach the procedure to other surgeons at professional conferences and through live webcasts. They've made numerous presentations and published widely on the subject, and patients from all over the Northeast come to them for treatment. ¶ Several factors contributed to Hartford Hospital's leadership in this field, including the hospital's purchase of specialized equipment, the synergy among Hartford Hospital surgeons from a variety of

disciplines and the volume of surgical cases performed at Hartford Hospital. ¶ Today, these colorectal surgeons perform approximately 225 laparoscopic colectomies annually. ¶ "The most many other hospitals may do is 50 a year," says colorectal surgeon Jeffrey Cohen, MD, "and some may do only 10 or 20. We are fourth or fifth in the country in terms of volume and far and away the largest in New England." ¶ Volume is critical, because only experience builds expertise. ¶ "You have to do 30 to 50 fairly straightforward cases before you've mastered the learning curve for average procedures," says colorectal surgeon William Sardella, MD. "You need to do more than

THE TECHNIQUE: The ileoanal pouch (“J-pouch”) procedure is a highly complex operation for ulcerative colitis. Hartford Hospital surgeons are among few in the country with extensive experience in performing it laparoscopically. Small incisions mean less trauma and faster recovery.

100 operations before you can move on to more difficult cases.” ¶ While aggressive in developing minimally invasive techniques, the colorectal surgeons have been careful to ensure quality of care. ¶ “When we first started doing this surgery, we offered it only as treatment for benign disease, not in cases of colorectal cancer,” says Paul Vignati, MD. “We wanted to gain more experience and be sure its results equaled those of open surgery. Only after we’d done hundreds of cases and seen evidence from research that it was equally effective did we start offering it to patients with colorectal cancer.” ¶ Dr. Vignati notes that one of the unique strengths of his group is that they have the expertise to perform procedures either laparoscopically or as open surgery. ¶ “A major benefit to patients who come to us is that we have all the tools in our tool bag,” he says. “Since we do a lot of laparoscopic surgery and a lot of open surgery, the patient benefits from having an experienced surgeon recommend the procedure that is best for that patient’s particular condition.” ¶ Hartford Hospital is one of very few places in the country with experience performing

laparoscopically a complex operation called an ileoanal pouch procedure. A reconstructive procedure for patients with ulcerative colitis, the operation, sometimes called a “J-pouch” procedure, bypasses the colon, but without necessitating a permanent colostomy. Approximately 75 such procedures have been performed at Hartford Hospital. ¶ Mastering complex procedures is part of the culture of this team of surgeons. ¶ “It’s our group’s philosophy to be the very best,” says Dr. Cohen. “We are fellowship-trained surgeons—specialists who can take care of patients other surgeons or hospitals can’t handle. It’s very rewarding to be at the forefront of providing the highest quality of care.” ¶ Kristina Johnson, MD, notes that her group’s quality of care is enhanced by the full range of outstanding subspecialty surgeons who practice at Hartford Hospital. ¶ “Colorectal disorders often involve other abdominal and pelvic organs, as well,” Dr. Johnson points out. “Being at Hartford Hospital, we can readily collaborate with experts in urology, gynecology and other fields to provide truly outstanding care to our patients.”

18 “HAVING THIS OPERATION IS THE BEST THING I’VE DONE. IT’S AS IF SOMEONE FLIPPED A SWITCH.”

Emily DeFrances
Newington, CT

Emily DeFrances suffered with ulcerative colitis for more than 12 years. Having exhausted all other therapies, she and her doctors decided surgery was the only answer. Fortunately, the 27-year-old Newington woman didn’t have to travel far for the complex ileoanal pouch procedure she needed. Colorectal surgeons at Hartford Hospital regularly perform the rare procedure, largely laparoscopically. Dr. Jeffrey Cohen did Mrs. DeFrances’s surgery in 2004. After surgery, she says, “I was amazed at how quickly I was back on my feet.” In fall 2007, Mrs. DeFrances returned to Hartford Hospital for a happy event: the birth of her second child. Dr. Cohen was present for the entire delivery. “It was good to see him again,” Mrs. DeFrances says. “He’s not just a great doctor—he’s also incredibly nice.”

“Other than getting married and having my children, having this operation is the best thing I’ve done. It’s as if someone flipped a switch. After years of frustrating and challenging symptoms, my life is suddenly and completely back to normal.”

RECENT ADVANCES IN MEDICAL IMAGING TECHNOLOGIES MEAN THAT TODAY'S PHYSICIANS HAVE UNPRECEDENTED ABILITY TO SEE INSIDE THE HUMAN BODY. THIS ABILITY TO VISUALIZE A PATIENT'S BRAIN, HEART, BLOOD VESSELS AND OTHER STRUCTURES—WITHOUT SURGICAL INCISIONS—HAS OPENED UP A NEW WORLD OF MINIMALLY INVASIVE TREATMENTS FOR CONDITIONS THAT ONCE REQUIRED EXTENSIVE OPEN SURGERY. A WIDE RANGE OF SERIOUS MEDICAL CONDITIONS ARE NOW REGULARLY BEING TREATED WITH MINIMALLY INVASIVE INTERVENTIONAL TECHNIQUES.

TREATING VASCULAR DISORDERS

At Hartford Hospital, patients with disorders of the arteries or veins, such as aneurysms, blood clots and stroke, are treated with the most advanced minimally invasive techniques available today. ¶ Vascular disorders of the brain include aneurysms (weaknesses in the blood vessel wall that can rupture); arteriovenous malformations (tangles of blood vessels); and blood clots that cause stroke. Hartford Hospital interventional neuroradiologists Gary Spiegel, MD, and his colleague Stephen Ohki, MD, both of Jefferson Radiology, are national leaders in using minimally invasive, endovascular procedures to treat these often life-threatening conditions. ¶ To treat any of these problems, the doctors thread a slender catheter through a small incision in the patient's groin, guiding it inside the blood vessels to the site of the aneurysm, malformation

or clot. As they do so, they observe the procedure on a fluoroscope. They then fill the aneurysm with tiny coils to prevent blood from flowing through it, which reduces pressure and risk of rupture. For a malformation, they use a glue-like substance to cut off the blood flow to the cluster. In the case of stroke, they can either use a tiny "hook" to snare the clot and remove it or inject medication that dissolves the clot. In the past, even if these conditions could be treated—and many, especially stroke, couldn't—doing so required surgical opening of the skull, disruption of brain tissue and weeks of recovery. With these minimally invasive procedures, Dr. Spiegel says, "There's often virtually no recovery time." ¶ "We are one of the busiest centers in the Northeast for treatment of acute strokes and the only center in Connecticut that regularly treats acute stroke with intra-arterial techniques," says Dr. Spiegel, >

THE TECHNIQUE: Today, interventional radiologists at Hartford Hospital can halt stroke by maneuvering a catheter through a small incision in the groin, through arteries, and into the brain, where they snare and remove the clot blocking the normal flow of blood.

who is Co-Medical Director of the Stroke Center and nationally recognized for his work. “With our 24/7 Stroke Center, neuro-intensive care unit and full range of specialized physicians, we surpass what patients will find even in New York or Boston.” ¶ Aneurysms that form in the abdominal aorta—AAAs, for short—can be silent killers. More than 200,000 patients are diagnosed with AAAs each year, yet most have no symptoms. Treating AAAs used to require a long incision in the patient’s abdomen or flank, a day or two in intensive care, about a week in the hospital and six weeks of at-home recovery. Today, a team of interventional radiologists and vascular surgeons at Hartford Hospital is treating this potentially life-threatening condition with stent grafting, a minimally invasive technique pioneered in part at Hartford Hospital more than 10 years ago. ¶ Using a catheter-based technique, physicians maneuver a flexible tube called a stent to the site of the AAA. Blood flows through the stent once it is in place, bypassing the aneurysm. The patient’s hospitalization is usually only two days, recovery at home is much faster and the risk of complications is significantly reduced. ¶ “Hartford Hospital is one of the top three institutions for performing this procedure in New England,” says Hartford Hospital physician Dr. Michael Hallisey, a member of Jefferson Radiology. Dr. Hallisey and the rest of the team of interventional radiologists and vascular surgeons have performed more than 600 AAA stent graft repairs at Hartford Hospital. An early participant in clinical trials of stent grafts, along with others at Hartford Hospital, Dr. Hallisey and his colleagues recently established an active AAA clinic, one of only a few in the Northeast.

¶ Interventional radiologists and vascular surgeons at Connecticut Surgical Group’s Connecticut Vascular Institute bring a wealth of experience to vascular disease. As a board-certified, fellowship-trained vascular and endovascular surgeon and a member of the Vascular Institute, Moh Cheema, MD, treats vascular disease using either open surgery or minimally invasive procedures. When a patient’s condition allows a minimally invasive approach, Dr. Cheema repairs aneurysms in both the abdominal and thoracic aortas. He notes that more and more cases are being done minimally invasively and that the benefits are dramatic. ¶ “Using stent grafts to repair aneurysms has reduced mortality from about 15 percent to less than 5 percent,” Dr. Cheema says. ¶ He adds that another significant risk of open thoracic and abdominal repair was paraplegia resulting from disturbances to the spinal cord caused by clamping and unclamping the aorta. ¶ “The risk of paraplegia is 10 to 15 percent with conventional surgery,” he says. “With minimally invasive stent graft repair, it is less than 5 percent.” ¶ Dr. Cheema also treats peripheral vascular disease—blockages in the arteries of the leg—with minimally invasive techniques that include balloon and drug-eluting stents, lasers and special “cutting” balloons, all of which remove the blockage and eliminate the need for bypass surgery. Instead of an incision from the groin to the calf, patients have just a puncture in the groin, and risks of infection, bleeding, heart attack and stroke are all significantly reduced. ¶ Dr. Cheema and his colleague, Mary Windels, MD, also use minimally invasive, endovascular techniques to open blocked arteries to the intestines and kidneys and to the legs.

ELIMINATING UTERINE FIBROIDS

Interventional radiology has made uterine fibroid tumors—a common but troublesome condition—much easier and safer to treat. ¶ “About one-third of women with fibroids require treatment for them,” says interventional radiologist Domenic Zambuto, MD, Director of Interventional Radiology at Hartford Hospital and a member of Jefferson Radiology.

“In the past, the options were to remove the fibroid surgically, remove the uterus or use hormone replacement therapy.”

¶ Surgery typically involved considerable pain and four to six weeks of recovery, though, and hormone therapy frequently simulated menopause. Fortunately, Dr. Zambuto and his colleague, Dr. Hallisey, are experienced in treating fibroids using a minimally invasive interventional technique called embolization. It eliminates the fibroid by cutting off its blood supply.

¶ “In the angiographic suite, we first map out the blood supply to the uterus,” says Dr. Zambuto. “We then place a micro-catheter into the artery supplying the fibroids and inject small particles into the fibroids, blocking the blood supply.” ¶ Most women go home the same day and are advised to rest for about a week. ¶ “In Connecticut, we have the most experience with this procedure,” says Dr. Zambuto. He notes that many women in the country still undergo surgery for the problem simply because their health care providers are unaware of this minimally invasive option.

OPENING CORONARY ARTERIES

Coronary artery disease is blockage or narrowing of the blood vessels of the heart that can cause chest pain and heart attack.

Treating it used to require open heart-bypass surgery. But today, patients are increasingly being treated with the minimally invasive procedure “coronary angioplasty.” During coronary angioplasty, the physician, viewing the patient’s arteries on a fluoroscope, threads a catheter through a small incision in the groin and into the openings of the coronary arteries. He or she then uses the catheter to advance a balloon that widens the artery and, often, to put a stent in place to keep the artery open.

¶ “Thirty years ago, coronary angioplasty became the first alternative to bypass surgery,” says Francis Kiernan, MD, an interventional cardiologist and Director of Hartford Hospital’s Cardiac Catheterization Laboratory. “Now, nationwide, more people are treated with this technique than with coronary bypass surgery.” ¶ Dr. Kiernan says that coronary angioplasty and stenting is the preferred treatment for patients who are having a heart attack.

¶ “We’ve found we can more reliably open the artery with angioplasty techniques than with medication. Patients have a greater chance of survival with angioplasty than with medication alone,” says Dr. Kiernan.

¶ Hartford Hospital’s 24-hour Cardiac Catheterization Laboratory and its dedicated group of interventional cardiologists ensure that this life-saving, minimally invasive therapy is available to patients day or night. ¶ Hartford Hospital was recently recognized by Medicare as one of the top 17 hospitals in the country in survival rates among patients with heart attacks. Dr. Kiernan says the achievement is due to “a coordinated effort involving the Emergency Department, the cath lab staff, clinical cardiologists and the intensive care units. It also involves LIFE STAR, which transports patients here from other >

hospitals where they can't receive such a high level of care.”

STABILIZING IRREGULAR HEARTBEAT

Hartford Hospital is one of only 100 centers in the country regularly performing an exacting, minimally invasive procedure that restores the normal rhythm of the heart. The procedure, called ablation, resolves atrial fibrillation, a condition in which the upper chambers of the heart beat irregularly or ineffectively. “A-fib” can lead to clots, which can cause heart attack and stroke. At the least, A-fib can cause shortness of breath, dizziness, extreme fatigue and other symptoms that harm the patient’s quality of life. It’s estimated that 5 million Americans have A-fib. ¶ Christopher Clyne, MD, Director of Interventional Electrophysiology at Hartford Hospital, says that patients undergo extensive evaluation before they are referred to him for ablation. ¶ “We use a comprehensive approach of medication and good general cardiac assessments and care, in collaboration with general cardiologists,” Dr. Clyne notes. ¶ The type of ablation Dr. Clyne and his colleague Ravi Yarlagadda, MD, use most often is radiofrequency ablation. In the lab, a small catheter with an electrode at the end is inserted through a puncture in the leg and guided through the patient’s veins to the heart. With the catheter in the heart, and while observing the heart on a fluoroscope, the physician maps the

left and right atria to identify the source of the irregularity. He then applies radiofrequency energy to that location to destroy the cells causing the problem. The patient is up and around six hours later. Seventy percent to 80 percent of patients who have the procedure are relieved of their symptoms. About 30 percent have recurrent arrhythmias, and about 20 percent require a second procedure. ¶ Drs. Clyne and Yarlagadda perform about 100 radiofrequency ablations annually. ¶ “We’re the only center in Connecticut that does such a large volume,” notes Dr. Clyne. “Because of our volume, we’ve been selected as one of only a few centers in the country to participate, along with the Mayo Clinic, in a National Institutes of Health multi-center research study comparing ablation therapy to medication therapy.” ¶ Dr. Clyne, who is board-certified in cardiovascular diseases, electrophysiology and internal medicine, says there aren’t many electrophysiologists in the country who do this procedure. ¶ “It’s said that, to do this procedure well, you have to *live* in the left ventricle. You have to do this frequently,” he says. “You have to be able to feel the ridges between the veins with your catheter. There are many imaging and fusion techniques that help, but there’s no substitute for simply *living* there.”

I WAS GIVEN ABSOLUTELY
THE WORLD’S BEST CARE
AT EVERY STEP IN THE
PROCESS.

Marissa Arnold
Simsbury, CT

Marissa Arnold was a 20-year-old junior at Mt. Holyoke College and co-captain of her soccer team when, on Oct. 10, 2006, she experienced a massive stroke caused by a blood clot in her brain. Thanks to fast action by friends, emergency medical responders and physicians at Holyoke Medical Center, Marissa was rapidly transported by LIFE STAR to Hartford Hospital’s Stroke Center. Within minutes, in an incredibly delicate procedure, interventional radiologist Stephen Ohki, MD, maneuvered a catheter through an artery in Marissa’s leg and into her brain, snagged the clot and removed it. Four days later, she went home, with virtually no residual effects. Marissa returned to school and to soccer and will graduate from Mt. Holyoke in May 2008. The incredible story was reported on NBC’s “Today Show.”

“I was given absolutely the world’s best care at every step in the process. I’m not showing any physical symptoms today, and I believe that has to do with how quickly I got care.”

Hartford Hospital's Board takes very seriously its responsibility to provide leadership and set direction for the future of the hospital. Last year, this resulted in the decision to objectively reassess the hospital's governance structure. While the existing governance system had served the hospital well, the Board sought to ensure that governance was structured optimally to meet the challenges of the future.

As a result of our work, which included an examination of national best practices, we implemented several changes. First, we revised the governance structure by creating two entities: a Board of Governors and a Board of Directors. Second, we created two new committees: the Patient Safety and Quality Committee and the Finance Committee. Third, we increased the amount of time Governors and Directors devote to Board activities. The purpose of these changes was to enhance accountability of management, Medical Staff and Board for the hospital's performance in finance, operations and quality.

Of course, ensuring consistently safe, high-quality patient care is everyone's overarching goal. The hospital's commitment to this goal was underscored this year by the creation of a new administrative position, that of Vice President of Patient Safety and Quality.

Philanthropy is another area in which the Board provides leadership. Hartford Hospital is financially strong today largely

because of 153 years of support from the community. The Development Committee and its Chair, Marla Byrnes, are to be commended for their accomplishments in this area.

Access to capital is one of the Board's foremost concerns. The ability to obtain capital is critical to any organization, but especially to a large tertiary care center such as ours, which has considerable facility, medical-technology and information-technology needs. We will be exploring solutions to this challenge in the coming year.

Productive communication among Board members, clinical staff and management long has been a hallmark of Hartford Hospital and one of the factors in its success. We will encourage this communication to continue, as it is essential to excellence in hospital management.

The Board is working diligently with management and the Medical Staff to shape a successful future for Hartford Hospital. However, the future of all Connecticut hospitals is a statewide issue. Having thriving, excellent hospitals and respected medical and dental schools is not only important to the health of Connecticut residents, but critical to the state's ability to compete successfully in the global economy as well. We urge state policy-makers to consider these facts as they contemplate future public-policy decisions.

A handwritten signature in black ink, appearing to read "Ramani Ayer". The signature is fluid and cursive, with a large initial "R" and "A".

Ramani Ayer
Chairman of the Board

Hartford Hospital is a great hospital largely because of the caliber of people who choose to practice and work here.

We welcomed many new physicians this year, among them Detlef Wencker, MD, of our Congestive Heart Disease Center and Heart Transplant Program. The heart transplant program has grown substantially thanks to Drs. Jonathan Hammond, Jr., and James Dougherty, and it will continue to expand with Dr. Wencker's involvement.

Other physicians who joined our Medical Staff this year are Amy Brown, MD, MPH, in Gynecologic Oncology; Paul Kanev, MD, Chief of Neurosurgery here and at Connecticut Children's Medical Center; and Adam Steinberg, DO, in the Division of Urogynecology. All are recognized experts in their fields. Pavlos K. Pappas, MD, will join our growing Bariatric Surgery program in January 2008. In today's health care environment, it is common for physicians to change practice settings, as several orthopedic surgeons did this year. Nevertheless, Hartford Hospital continues to have a cadre of gifted orthopedic surgeons, a complete range of services and an expanding Joint Replacement Program.

Jamie Roche, MD, returned to Hartford this year as Vice President for Patient Safety and Quality. The creation of this new position underscores the hospital's commitment to safety and quality, and Dr. Roche brings a wealth of experience to his role.

Jeffrey Flaks joined us as Executive Vice President and Chief Operating Officer, replacing Kevin Hannifan. We thank Mr. Hannifan for his service and welcome Mr. Flaks, who is an accomplished hospital executive, having most recently served as Chief Operating Officer at MidState Medical Center.

We expanded further into the community with the opening of West Hartford's Blue Back Square, where we offer many services, including ambulatory surgery, cardiology and women's

health services. In the fall, we broke ground on the new Helen & Harry Gray Cancer Center Avon, which is expected to open in the summer of 2008.

We experienced an operating loss this year as a result of the decision to increase staff and add resources in critical areas and set the stage for future growth. These are one-time expenses, and we expect to break even or better in 2008. Our balance sheet remains strong, thanks to prudent decision-making and strong philanthropy.

During the 2007 legislative session, disagreements arose regarding the University of Connecticut Health Center's proposal to replace and expand John Dempsey Hospital. The legislature chartered a study of the issue, which was under way as the fiscal year ended. It is encouraging that, also at year-end, leaders from UConn and the major teaching hospitals were engaged in discussions about options for the future of the health center.

Strategic and facilities planning work by management and clinical leadership culminated in a special meeting of the Board of Directors on Oct. 2. The Board endorsed an updated three-year strategic plan and authorized further work on campus renovation and expansion concepts. Specific proposals based on these facilities concepts will be submitted for Board approval in 2008.

Since Hartford Hospital's founding 153 years ago, generations of people have given their talent and energy to create the outstanding hospital that was entrusted to us. Thanks to all the people—physicians, staff, donors, directors and volunteers—who contribute so much to Hartford Hospital today, we will leave to future generations a hospital that continues to be one of America's premier health care institutions.

John Meehan
President and Chief Executive Officer

06

NOV'06 This year the Institute of Living's annual Burlingame Dinner honored **Burlingame Award** winner Daniel N. Stern, MD, center, flanked by Dr. Hank Schwartz, left, and John Meehan.

NOV'06 New imaging technology dubbed "Sireskop" was formally welcomed with a ribbon cutting ceremony. (L-R) Bob Rice, John Fagan, Dr. Stu Markowitz and John Meehan.

NOV'06 The Auxiliary's annual **Lobby Market** is a popular fundraiser.

07

JAN'07 Attendees at the "Is it Hot in Here?" luncheon focused on issues of menopause.

FEB'07 Dr. Lenworth Jacobs, left, and Maria Tackett, RN, at one of the hospital's **bioterrorism preparedness** drills.

FEB'07 "Employee of the Year" Darlene Henry, holding plaque, with (L-R) Joe Rapisarda, Lucette Dunlop and Joe Szymanski.

MAY'07 Celebrating at the **Nightingale Awards** are (L-R): Karen Habig, RN, Sue Gallagher, RN, Barbara Emery, RN, and Michele Kolios, RN.

MAY'07 Enjoying the annual **Nightingale Award Ceremony** to honor nurses are, from left: Vicie Brooks, RN; Joe Mugovera, Amanda Mugovera, RN, and Laura Caramanica, RN, PhD.

MAY'07 The annual "Cutathon" at Matthew Phillips' studio in West Hartford is always a successful fundraiser for the Cancer Center.

NOV'06 The Annual Meeting of the Corporation heard a presentation from Drs. Stephen Ohki and Gary Spiegel on the remarkable case of a young woman whose stroke-causing brain clot was safely removed.

DEC'06 The IOL Auxiliary's annual "Toy Tea" took place at the home of Mrs. Frank Falvo, Jr.

DEC'06 More revelry at the annual employees' holiday party, with Dr. Neil Yeston, volunteer workers from the Auxiliary and hospital staff members.

DEC'06 Dick McAloon and Debbie Caldwell demonstrate the holiday spirit at the hospital's annual holiday party for employees.

APRIL'07 The IOL's annual Braindance Award, teaching students about mental illness and helping to eliminate stigma, was awarded to Brittany Speisman, holding plaque. (L-R) Pat Rehmer of DMHAS, speaker Dr. Bruce Link, and Dr. Jim Seltzer.

APRIL'07 Weatherman Scott Haney, left, mugs in the hospital lobby while here to autograph HH/Channel 3 coffee mugs.

MAY'07 The Auxiliary's co-presidents, Priscilla Viets, left, and Shelli Siegel, preside over the annual meeting held this year at Hartford Hospital.

MAY'07 The annual Quarter Century Club celebration for 25-year employees was, as usual, a great party.

JUNE'07 Appreciating Hartford Hospital's status as an official "Baby Friendly" hospital are, from left: Sara Young, CNS; Aimee Garbett holding baby Lila; and Pam Gregg, RN.

JUNE'07 Harry and Helen Gray, alongside Dr. Andrew Salner, enjoy front row seats at the Helen & Harry Gray Cancer Center's annual "Celebrate Life" event.

07

JUNE'07 At the ground-breaking ceremony for the hospital's new cancer center in Avon are (L-R): John Meehan, Dr. Andy Salner, Harry and Helen Gray. It was announced in December that the center would be named the "Helen & Harry Gray Cancer Center—Avon."

JUNE'07 Hartford Hospital's Prostate Cancer Support Group celebrated a "Sweet 16" anniversary. (L-R) Carole Fox, CURN, Dr. James Graydon, and Peg Garrison, APRN.

JULY'07 The new Sleep Disorders Center opened in July. (L-R): Liz Fowler, Dr. Natalya Thorevska, Corrine Carcano, John Meehan.

JULY'07 With a ceremonial snip of the ribbon, the new West Hartford Surgery Center at Blue Back Square was officially opened. (L-R) Dr. Jeffrey Morgenstern, West Hartford Mayor Scott Slifka, Dr. Douglas Viets, Louise DeChesser and John Meehan.

JULY'07 The opening of the hospital's new surgery center at Blue Back Square in West Hartford drew a large audience interested in seeing the new facility.

JULY'07 Allied Health students traveled to Camp Courant to pass on tips for healthy living to the young campers.

AUG'07 VP Kevin Kinsella and artist Diana Boehnert admire the life-sized "LIFE STAR HeliCOWpter" she created for the West Hartford "Cow Parade."

SEPT'07 Pictured at the Partnership for Breast Care's "Pink Flamingos" event are, (L-R) Sonja Larkin-Thorne, Channel 30's Lisa Carberg and Roxanne Rotondaro.

SEPT'07 Dr. Beth Brady, right, chats with the crowd at the Pink Flamingos event.

*Partial List

OUR MISSION IS TO PROMOTE, RESTORE AND MAINTAIN THE HEALTH OF ALL THE PEOPLE WE SERVE.

OUR VALUES

Patient-Centered Care

In all our endeavors, we are guided by the needs of the patient, creating a partnership that is effective and personal across the continuum of care.

Continuous Learning

We actively support outstanding programs of education and research designed to encourage the acquisition of knowledge and skills that are of value to the organization and the community.

Community

We actively develop partnerships that will improve our community and, as stewards of a public trust, we ensure informed and dignified care for all patients regardless of their ability to pay.

Communication

We strive to acquire and understand information, and share it clearly and effectively.

Relationships

We develop and strengthen collaborative relationships with all of our customers, including our patients, their families, our employees, volunteers, Medical Staff, and our business partners.

Diversity

We recognize, respect and actively support differences among individuals and demonstrate this philosophy through our words and actions.

Human Resources

We support the professional and personal growth of employees in their pursuit of the hospital's mission.

Service Excellence

In every interaction we have with patients, visitors, physicians, co-workers and other employees throughout the hospital, we demonstrate our commitment to anticipating, meeting and exceeding their expectations.

Organizational Ethics

We are guided by ethical values that emphasize honesty, fairness, dignity, and respect for the individual.

Superior Performance

We strive for superior performance in all that we do, to preserve the hospital's clinical, organizational and financial strength.
